

Appendix 5.5

The following appendix contains all of the raw data used in analysing the triaxial tests undertaken in this study. The calculations were based off the BS1377 (1990). The setup of the Microsoft Excel spreadsheets was undertaken following those from Wyatt (2009). For each sample a Microsoft Excel spreadsheet displays the calculations undertaken to create the Mohr circle diagrams and the construction of the stress versus strain, PWP versus strain and stress path plots.
