

# Coastal Storm Database - Event Summary

Date: <b>6 Nov 1968</b>	Wind Direction: <b>S</b>
Event Type: <b>Wind</b>	Gisborne Duration (Hours): <b>8</b>
Location: <b>Gisborne</b>	Wellington Duration (Hours): <b>-</b>
Origin: <b>Southern Ocean</b>	Pressure Gradient: <b>SW</b>
Type: <b>Trough</b>	

## Synoptic Conditions

A trough of low pressure was east of NZ while a large anticyclone was in the Tasman sea and spread a ridge over the South Island. A southwest airstream developed between these systems over NZ on the 5th and had weakened by the 16th as the high moved onto NZ.
