

Coastal Storm Database - Event Summary

Date: **26-27 Jul 1969**

Wind Direction: **S**

Event Type: **Wind**

Gisborne Duration (Hours): **-**

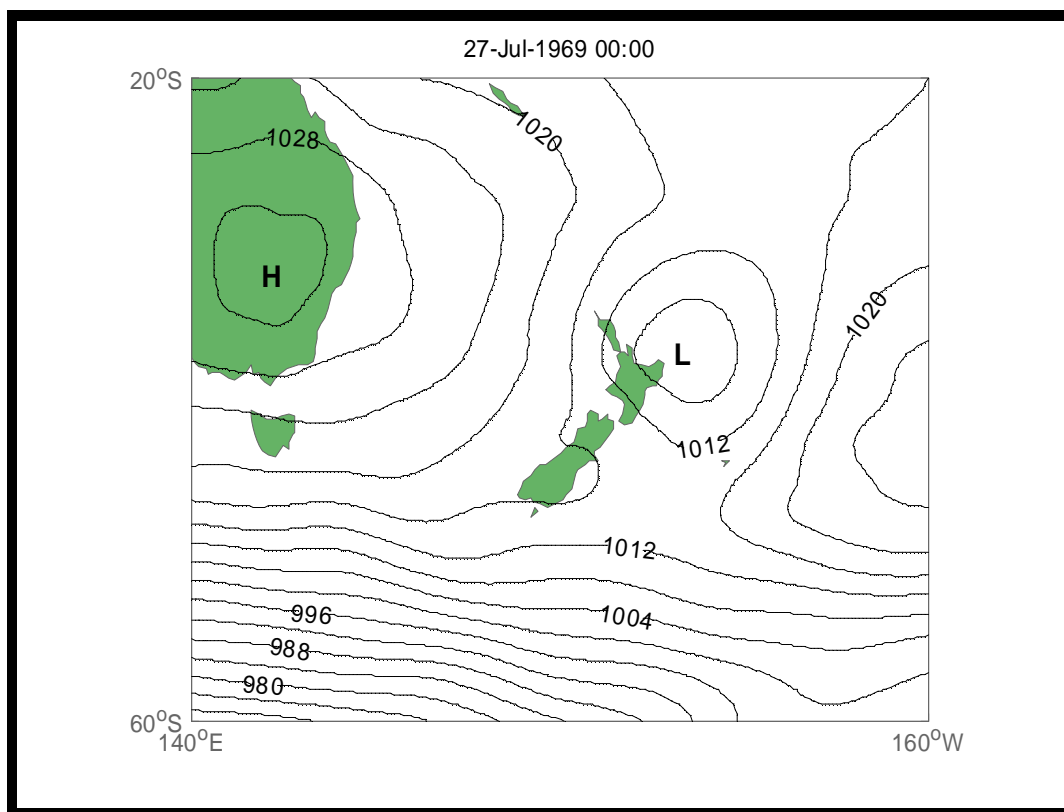

Location: **Wellington**

Wellington Duration (Hours): **27**

Origin: **Tasman Sea**

Pressure Gradient: **SE**

Type: **East Coast Low**

Synoptic Conditions

A cyclonic centre developed from a southern ocean trough west of Northland and slowly moved across the upper North Island. At this time the cyclone was embedded between two anticyclones. On the 26th a SE airstream developed on the southern side of the cyclone and affected the eastern North Island.
